

Ivan Ivanov entered the section of Elementary Particles, which is charged to me, at the Institute of Theoretical and Experimental Physics about two years ago. A closer acquaintance with him was made last winter when he had passed special exam, given by ITEP for the students who are going to work in theoretical physics.

The exam consists in solving quantum physics problems, including rather difficult ones, which are similar to those, arising from everyday theoretical work of scientist. Mr. Ivanov demonstrated profound understanding of underlying physical phenomena, good skill in using mathematical methods and ability to represent his results at high scientific level.

Now Ivan attends my lectures and seminars on Quantum Field Theory. He copes with the subject very well and shows clear comprehension of the theory structure along with aptitude for solving problems.

Concerning Ivan's relative standing, I consider him as the best one in his group of 19 MPTI students. He have worked a lot at theoretical laboratory of ITEP during half a year and has produced interesting results which will be published in leading scientific European journal. He works productively and intensively.

Therefore, I evaluate Ivan Ivanov as a person having a high potential to carry on advanced study in the field of Theoretical High Energy Physics and strongly recommend him for further education at the department of Physics.

Prof. Petr P. Petrov  
Principal Scientific Researcher  
Institute of Theoretical and Experimental Physics,  
Cheremushkinskaya 25, Moscow
